Overview

The modular, row-based computer room cooling system offers efficient, predictable, and economical cooling for a variety of spaces.

Critical environmental requirements now reach far beyond the confines of the traditional data center or computer room to encompass a larger suite of applications, referred to as technology rooms. Critical environment applications include:

- Computer rooms
- Telecommunication facilities
- Clean rooms
- Power equipment
- Medical equipment rooms
- LAN/WAN environments

A worldwide network of APC representatives is fully qualified to provide engineering, sales, installation, and service for our products.

APC warrants all parts for 12 months from the date of purchase. Extended warranties are available.

Capacities

InRow RD units are available in two sizes (300mm and 600mm) with nominal capacities ranging from 2-10kW (300mm) and 10-29kW (600mm).

Room Air Distribution

Row-based systems are placed in line with rack enclosures. At least one system is used per hot aisle. Air is drawn in through the rear of the system, cooled, and discharged into the cold aisle, thereby neutralizing the sensible heating effects of the data processing equipment. The InRow RD delivers high volumes of airflow to eliminate hot spots in densely populated environments.

Configuration

- Air-cooled
- Fluid-cooled

Compliance Approval

- UL Listed
- CE
- C-Tick
- C-UL Listed

Standard Features

All series:

- Variable-speed fans
- Shutdown input/alarm output
- 2-way/3-way floating point valve
- Top or bottom piping
- Network Management Card (NMC)
- Baying kit-InRow RD to NetShelter® SX rack
- Remote temperature sensor
- Microprocessor controller

ACRD100 series and ACRD200 series only:

- Insulated cabinet
- Washable filter
- Condensate management with two dual float condensate pumps
- Scroll compressor
- Hot gas bypass

ACRD100 series only:

- Liquid line solenoid valve

ACRD500 series only:

- Backward inclined impeller
- Pleated 100-mm (4-in) filter
- NPT to BSPT pipe adapters
- Condensate management with one dual float condensate pump
- Variable speed reciprocating compressor using VFD control
- Pressure equalization solenoid
- Pipe adapters

Accessories

- Cable leak detector
- Baying kit-InRow RD to NetShelter VX rack
- NetShelter SX 42-U to 48-U height adapters
- NetShelter VX 42-U height adapters
- Bridge trough power cable shield
- Data cable bridge partition
- Isolation ball valves (ACRD100 series only)
- Dry cooler
- Condenser

Scalable Solution for Critical Environments

InRow Advantages

The row-based solution improves energy efficiency and cooling ability in a number of ways. First, the InRow RD draws air directly from the hot aisle, allowing the InRow RD to take advantage of higher heat transfer efficiency due to higher temperature differences. It can then discharge room-temperature air directly in front of the servers it is cooling. Placing the cooling unit in the row enables the unit to operate at higher return and supply air temperature, yielding 100% sensible capacity. This significantly reduces the need for humidification.

Scalable for High Density

The predictable performance of the row-based architecture makes it well-suited for high density applications. The focus on heat removal instead of cold air delivery is the key to making this approach scalable. The modular design of the InRow RD allows it to be easily added in the row as the demand for cooling increases.

The additional benefit of the row-based architecture is the ability to add hot aisle containment. Containing the hot aisle further reduces any chance of hot and cold air streams mixing. This provides ultimate predictability and allows the cooling capacity to be matched to the IT heat load.

Hot Aisle Containment System

Modular ceiling tiles and doors can be used to enclose the hot aisle. This increases the densities that can be handled in a single rack enclosure by eliminating mixing of hot and cold air streams. This method, called load neutralization, removes the heat from the hot aisle, cools it, and then returns it to the surrounding room area at or slightly below room temperature. The warmer return air temperatures that are achieved in this application increase the capacity of the air conditioner.

Use of modular ceiling tiles across a 914.4-mm (3-ft) hot aisle that connects two opposite rack enclosures makes expansion quick and simple. Expansion kits, with the necessary ceiling tile and all baying hardware, can be ordered to increase the size of the hot aisle by one rack on each side. The end doors can be easily removed and re-attached for expansion.

The enclosed hot aisle prevents any warm return air from mixing with cold supply air. In effect, all surrounding room air can act as supply air to the system. The hot aisle containment system is beneficial in any environment. It can be deployed quickly in any controlled space without expensive additions to the infrastructure, such as raised flooring or ductwork.

Dimensions are shown in mm (in).

Standard Features

Cabinet

The frame is constructed of 16 gauge formed steel for maximum strength. The cabinet is serviceable from the front and rear. All exterior panels and corner posts on the frame are powder coated for durability and an attractive finish. The front and rear exterior panels are constructed of 18 gauge perforated steel with 69.5% open free area. All panels, which include a key latch for safety and security, allow easy access and removal. Insulation (ACRD100 and ACRD200 series only) is 80.1 kg/m³ (5 lb/ft³) density and complies with ASTM E84 rating of 25/50.

Shutdown Input/Alarm Output

The unit provides one field connection input for remote shutdown and one field connection alarm output.

Variable Speed Fans

Each unit is equipped with variable speed fans to allow for varying heat loads. In order to provide uniform airflow over the cooling coil, the fans provide a draw-through air pattern. The ACRD100 and ACRD200 series units are equipped with six direct drive fan modules. These fans are easily replaceable while the unit is in operation. The ACRD500 series is equipped with two backward inclined, direct drive fans.

Counterflow Cooling Coil/ Condensate Pan

Designed for high sensible heat ratios, the coil is constructed with copper tubes, raised lance type aluminum fins, and 18 gauge galvanized steel end plates. Coil headers are equipped with anti-drip shields in the event of condensation. The condensate pan is thermal formed non-ferrous material, and is sloped for positive drainage to provide higher indoor air quality.

Filters

Filtration of conditioned air is extremely vital to maintaining the clean, particle-free environment required by electrical equipment. Filters are easily replaceable from the rear of the unit. The ACRD100 and 200 series systems use greater-than 20% efficiency ASHRAE 52.1, 12.7 mm (1/2 in) washable filters that meet HF-1 standards for electronics (MERV 1 per ASHRAE 52.2). The ACRD500 series system uses a 30% efficient, 102 mm (4 in), deep loading, pleated filter (MERV 8 per ASHRAE 52.2, EN779 G4).

Selectable Top or Bottom Piping Connections

The unit includes both top and bottom piping connections. All ACRD100 and ACRD500 series connections utilize Roto-Lok fittings for ease of installation and service. The ACRD200 series uses union connectors.

Condensate Pump

ACRD100 and ACRD200 series:

Two pumps are factory wired and piped (in parallel) internally to the condensate drain pan. Acting together, the pumps are capable of pumping 9.8 l/hr (2.6 g/hr) against head pressures of up to 50 ft (15.2 m) of total run. Of that run, 16 ft (4.9 m) can be vertical lift as measured from floor level. Dual floats are included with the unit. One float is used for condensate pump control, and the other float generates a condensate pump failure alarm. The InRow RD can be set to either continue running in an alarm condition or shut down to prevent condensate pan overflow.

ACRD500 series:

The single condensate pump is factory wired and piped internally to the condensate drain pan. The pump is capable of pumping a maximum of 18 m (60 ft) at 32 l/h (8.45 g/hr), which may include a maximum lift of 3.5 m (11.5 ft) as measured from floor level. Dual floats are included with the unit. One float is used for condensate pump control, and the other float generates a condensate pump failure alarm to prevent condensate pan overflow.

Network Management Card

The Network Management Card (NMC) allows communication with the Local Area Network (LAN). In addition, the NMC permits multi-level access to monitoring, control, and event notification features over the building network.

Bay Kit-InRow RD/ NetShelter SX

Baying kits made of 16 gauge steel enable baying the InRow RD to APC NetShelter enclosures.

Remote Temperature Sensors

To control the unit based on rack inlet temperature, remote temperature sensors are provided. The ACRD100 and ACRD200 series units come equipped with one temperature sensor, and the ACRD500 series units come equipped with three. These sensors measure temperature at a point 4m (13ft) from the connection inside the InRow RD unit. These sensors are used for remote placement in the field on an adjacent IT rack.

Optional Features

Cable Water Detector

A leak detection cable is placed on the floor or subfloor around all possible leak sources. If water or other conductive liquids contact the cable anywhere along its length, the micro-processor controller announces the leak visually, audibly, and across the network. The 6.1-m (20-ft) cable may be cascaded to make custom lengths up to 24.4 m (80 ft).

Network Cable

Various lengths of network cable are available to ship with your cooling system. The network cable is used to interconnect multiple cooling units in a redundant group, as well as to connect the Network Management Card to your LAN.

Filters

Electrical equipment requires clean, particle free air, thus making air filtration extremely important. As an optional feature, higher efficiency filters can be purchased for the InRow RD units. The ACRD100 and ACRD200 series units optionally utilize an 50.8mm (2in) pleated, deep loading, 30% ASHRAE 52.1 filter (MERV 8 per ASHRAE 52.2). The ACRD500 series units optionally utilize 102mm (4in) pleated, deep loading, 85% ASHRAE 52.1 filter (MERV 13 per ASHRAE 52.2).

Power Trough

Overhead power distribution between adjacent NetShelter racks allows for removal of the InRow RD without disrupting overhead power cabling.

Data Partition

Overhead cable distribution between adjacent NetShelter racks allows for removal of the InRow RD without disrupting overhead cabling.

Height Adapters

To match the height of the InRow RD to various rack heights, height adapters are available for NetShelter 42-U VX and 48-U SX racks.

Microprocessor Controller

1	Critical Alarm LED
2	Warning Alarm LED
3	Check Log LED
4	Status LED
5	Liquid Crystal Display (LCD)
6	Menu Selection scroll keys
7	Escape key
8	Enter key
9	Help key

Microprocessor Controller

The microprocessor controller is standard on each unit. The controller provides precision control for the demanding requirements of the following environments:

- Computer rooms
- Telecommunication facilities
- Clean rooms
- Power equipment
- Medical equipment rooms
- LAN/WAN environments

The easy-to-use display interface allows the operator to select options from the menu-driven interface to control and monitor the connected air conditioning system.

Open Architecture

The InRow RD protocol is open for integration with all building management systems. Communication interface on the system can be Modbus RS485 or Ethernet.

Control Type

The controller utilizes proportional/integral/derivative (PID), a time-proven precision environmental control method. This allows for custom tuning of control variables to achieve desired system response.

Functions

- Supply and return air conditions
- Operational mode control
- Event logging
- Alarms
- Redundant group control
- Fan speed adjustment
- Input/output module programming

Logging

The event log keeps a record of all alarms and events. Each event log contains a time/date stamp as well as operating conditions at the time of occurrence. The controller also displays run time, in hours, for major components (air filters, fans, and condensate pump, as well as humidifier, heater, and compressor for the air-cooled unit).

Display Interface

The backlit, four-line by twenty-character display interface is password configurable.

Alarms

The microprocessor controller shall activate a visible and audible alarm in the following occurrences:

All series:

- Cool Fail
- Air filter clogged
- Return air sensor fault
- Supply air sensor fault
- Rack temperature sensor fault
- High discharge pressure
- Low suction pressure
- Fan fault
- Water detected
- Condensate pump fault
- Air filter run hours violation
- Group communication fault
- Supply air high temperature violation
- Return air high temperature violation
- Filter DP sensor failure
- Suction pressure sensor failure
- Discharge pressure sensor failure
- Persistent high discharge pressure fault
- Rack inlet temperature high violation
- External communication fault
- Internal communication fault
- On standby input contact fault
- A-link isolation relay fault
- Excessive compressor cycling

ACRD100 series and ACRD200 series only:

- Condensate pan full
- Upper fan power supply fault
- Lower fan power supply fault
- Suction temperature sensor failure
- Persistent low suction pressure fault

ACRD200 series only:

- Condenser fluid valve actuator fault
- Outdoor heat exchanger (OHE) fault
- Factory configuration not completed
- Liquid refrigerant sensor failure

ACRD500 series only:

- Compressor drive communication fault
- Compressor drive fault
- Compressor drive warning
- Compressor run hours violation
- Condensate pump run hours violation
- Fan run hours violation
- Supply humidity sensor fault
- High suction pressure

Airflow for the ACRD100 and 200 series is 1081 l/s (2290 SCFM) at full evaporating fan speed.

Airflow for the ACRD500 series is 2171 l/s (4600 SCFM) at full evaporating fan speed.

¹Airflow is reduced to 887 l/s (1880 SCFM) at this condition to maintain adequate evaporating temperature.

²Airflow is reduced to 717 l/s (1520 SCFM) at this condition to maintain adequate evaporating temperature.

³Airflow is reduced to 599 l/s (1270 SCFM) at this condition to maintain adequate evaporating temperature.

⁴Airflow is reduced to 510 l/s (1080 SCFM) at this condition to maintain adequate evaporating temperature.

⁵Airflow is reduced to 448 l/s (950 SCFM) at this condition to maintain adequate evaporating temperature.

Note: Minimum recommended loads: ACRD100 series and ACRD200 series - 2kW (6,831 BTU); ACRD500 series - 10kW (34,152 BTU)

Note: For ACRD100 and ACRD500 series the outdoor air temperature is 35° C (95° F)

Note: For ACRD200 series, a 40% at 0.64 l/s (10gpm), the entering glycol mixture temperature is 40.6° C (105° F)

100	All	2200 (4600)	16.17	1.55	37.9 (129,435)	27.1 (80.7) ²

¹ In this case, the compressor will cycle because its speed is down to the minimum of 35 Hz.

The minimum fan speed for the InRow mode is 30%; the minimum fan speed for HACS and RACS mode is 40%.

² SA temperature is above 25° C (77° F)

Note: Outdoor temperature is 35° C (95° F)

General Data

General Specifications - ACRD200 Series

Data	Units	Water Cooled	Glycol Mixture Cooled
Nominal flow rate entering to the unit	l/s (gpm)	0.64 (10.0)	0.64 (10.0)
Design entering temperature	°C (°F)	29.4 (85.0)	40.6 (105.0)
Maximum heat rejection	kW (Btu/hr)	15.2 (52,000)	15.2 (52,000)
Maximum glycol percentage	%	0	40
Entering temperature range for 0.64 l/s (10 gpm) flow rate entering to the unit	°F (°C)	12.8 - 43.3 (55.0 - 110.0)	12.8 - 43.3 (55.0 - 110.0)
Unit pressure drop at 0.64 l/s (10 gpm)	kPa (psi)	33.1 (4.8)	43.4 (6.3)

Fluid-cooled

MODEL	ACRD200 Series
AIR SYSTEM - FAN (Standard Filter Installed)	
Size - mm (in)	200 (7.9)
Air Volume - l/s (SCFM)	1080 (2290)
Fan Motor - W (HP) each	115 (0.15)
Number of Fans	6
COOLING COIL - COPPER TUBE/ALUMINUM FIN	
Face Area - m ² (ft ²)	0.37 (3.97)
Rows Deep	2
FILTERS - WASHABLE (STANDARD)	
Quantity	2
Size - mm (in)	238 X 933 (9.375 X 36.75)

Check valve

P-trap

S-trap

Inverted P-trap

Pressure relief valve

Note: Route piping through the top or bottom of the InRow RD.

Note: All lines are Type L ACR copper tubing.

Note: Trap the vertical discharge line every 6 m (20 ft) to ensure proper oil return.

Note: Pipe size should change after the P-trap based on the recommended piping charts provided with the installation manual. See the piping diagram created for your site.

Note: The maximum piping run is 61 m (200 ft) equivalent length. Size the piping pursuant to accepted refrigeration practice.

Note: ACRD100 series only: any equivalent length greater than 46m (150 ft) will result in a 5% decrease in capacity.

Warning: Do not install the air-cooled condenser below the InRow RD. The condenser must be positioned above or at the same level as the InRow RD to ensure proper function.

Air-cooled Condenser Features

Available in one to three fan configurations, APC offers air-cooled condensers with a vertical air discharge pattern. The RD500 series condensers utilize variable speed EC motor technology for improved sound and energy performance. All other condensers utilize variable speed motors.

60 Hz specific features:

- Side access panels for ease of cleaning coil
- Constructed with aluminum housing
- Weatherproof control panel with a factory-mounted door interrupt disconnect switch

50 Hz specific features:

- Constructed with painted galvanized steel

Note: A disconnect should be field-supplied based on maximum overcurrent protection (MOP) numbers.

Guide Specifications

PART 1 — GENERAL

1.01 SUMMARY

- A. The environmental control system shall be designed specifically for precision temperature control applications. It will automatically monitor and control cooling and filtering functions for the conditioned space. The system shall be built to the highest quality engineering and manufacturing standards, and shall be floor mounted and configured for horizontal airflow, with draw-through air pattern, to provide uniform air distribution over the entire face of the coil.

1.02 DESIGN REQUIREMENTS

- A. The system shall be as described in the following specification as manufactured by APC.
 1. Model: _____.
 2. Total net cooling capacity: _____ kW (MBH).
 3. Sensible net cooling capacity: _____ kW (MBH).
 4. Return air dry bulb temperature: _____ °C (°F) DB.
 5. Return air wet bulb temperature: _____ °C (°F) WB.
 6. Humidity: _____ % RH.
 7. Air volume: _____ L/s (CFM).
 8. Electrical supply: _____ V, _____ Hz.

1.03 SUBMITTALS

- A. Submittals shall be provided with the proposal and shall include: capacity data, electrical data, physical data, electrical connection drawing, and piping connection drawing.

1.04 QUALITY ASSURANCE

- A. The system shall be completely factory-tested prior to shipment. Testing shall include, but not be limited to: complete pressure and leak testing to ensure system integrity, dielectric withstand test, and controls calibration and settings. Each system shall ship with a completed test report to verify completion of factory testing procedure. The system shall be NRTL listed, MCA, and the electrical system shall be UL Listed to UL 1995 and CSA 22.2 No. 236.

1.05 WARRANTY

- A. System parts shall be warranted for a period of 18 months from date of shipment and 12 months from startup.

PART 2 — PRODUCT

2.01 STANDARD COMPONENTS

A. Cabinet Construction

1. Front and rear exterior panels shall be 18 gauge perforated steel with 69.5% open free area, and equipped with a keyed lock to provide a means of securing access to the internal components of the unit.
 - a. ACRD100 and ACRD200 series only: Exterior panels shall be 18 gauge steel with 80 kg/m^3 (5 lb/ft^3) density foam insulation. Insulation complies with UL94-5VA ASTM E84 flame spread and smoke developed rating of 25/50.
2. The frame shall be constructed of 16 gauge formed steel welded for maximum strength. All units shall provide maintenance from the front and rear, allowing units to be placed within a row of racks.
3. All exterior panels and frame shall be powder coated for durability and attractive finish. Exterior frame and panel color shall have color values: L = 74.50, a = -0.53, b = +8.20.
4. Units shall include casters and leveling feet to allow ease of installation in the row and provide a means to level the equipment with adjacent IT racks.

B. Fans

1. Variable speed direct drive mixed flow DC fan assembly (ACRD100 and ACRD200 series):
 - a. The unit shall be configured for draw-through air pattern to provide uniform air flow over the entire face of the coil. Each unit shall include six 200 mm mixed flow direct drive DC axial fans. Each fan assembly should be designed to provide 180.1 l/s (381.7 CFM) for total unit airflow of 1080.76 l/s (2290 CFM). The ACRD500 series includes two fans. Each fan provides 1085.5 l/s (2300 CFM) for a total unit airflow of 2171 l/s (4600 CFM).
 - b. Variable speed fans: Fans shall be variable speed capable of modulating from 30-100%. Fans shall soft start to minimize in-rush current.
 - c. Fan protection: Each fan assembly shall consist of a plastic injection molded bezel with integral fan discharge finger guard. Inlet of the fan should include a cage type finger guard.
 - d. Operation and service: The unit should be capable of operation in the event of a fan failure. Fans shall be replaceable while the unit is in operation.
2. Variable speed fan assembly (ACRD500 series):
 - a. Variable speed fans: The unit is equipped with two variable speed, electronically commutated, 400-mm backward incline fans complete with inlet volute.
 - b. Fan protection: discharge finger guard. Outlet of the fan should include a cage type finger guard.
 - c. Operation and service: The unit should be capable of operation in the event of a fan failure.

C. Main Disconnect Switch

1. The unit shall be provided with thermal-magnetic circuit breakers with interrupt capacity ratings per UL489/CSA C22.2/IEC-947.

Voltage	kAIC
200-240V 50/60Hz	50
380-415V 50Hz	36
460-480V 60Hz	22

2. Units shall include a main disconnect switch located on the electrical panel in order to disconnect the power input.
3. A condenser disconnect shall be field-supplied.

D. Microprocessor Controller

1. Monitoring and configuration: The display interface shall allow monitoring and configuration of the air conditioning unit through a menu-based control. Functions include status reporting, set-up, and temperature set points. Four LEDs report the operational status of the connected air conditioning unit.
2. Controls: The microprocessor controller shall come equipped with control keys to allow the user to navigate between menus, select items, and input alpha numeric information.
3. Alarms: The microprocessor controller shall activate a visible and audible alarm in the occurrence of the following events:
 - a. Cool Fail
 - b. Air filter clogged
 - c. Return air sensor fault
 - d. Supply air sensor fault
 - e. Rack temperature sensor fault
 - f. High discharge pressure
 - g. Low suction pressure
 - h. Fan fault
 - i. Water detected
 - j. Condensate pump fault
 - k. Air filter run hours violation
 - l. Group communication fault
 - m. Supply air high temperature violation
 - n. Return air high temperature violation
 - o. Filter DP sensor failure
 - p. Suction pressure sensor failure
 - q. Discharge pressure sensor failure
 - r. Persistent high discharge pressure fault
 - s. Rack inlet temperature high violation
 - t. External communication fault

- u. Internal communication fault
 - v. On standby input contact fault
 - w. A-link isolation relay fault
 - x. Excessive compressor cycling
 - y. Condensate pan full (ACRD100 series and ACRD200 series only)
 - z. Upper fan power supply fault (ACRD100 series and ACRD200 series only)
 - aa. Lower fan power supply fault (ACRD100 series and ACRD200 series only)
 - ab. Suction temperature sensor failure (ACRD100 series and ACRD200 series only)
 - ac. Persistent low suction pressure fault (ACRD100 series and ACRD200 series only)
 - ad. Condenser fluid valve actuator fault (ACRD200 series only)
 - ae. Outdoor heat exchanger fault (ACRD200 series only)
 - af. Factory configuration not completed (ACRD200 series only)
 - ag. Liquid refrigerant sensor failure (ACRD200 series only)
 - ah. Compressor drive communication fault (ACRD500 series only)
 - ai. Compressor drive fault (ACRD500 series only)
 - aj. Compressor drive warning (ACRD500 series only)
 - ak. Compressor run hours violation (ACRD500 series only)
 - al. Condensate pump run hours violation (ACRD500 series only)
 - am. Fan run hours violation (ACRD500 series only)
 - an. Supply humidity sensor fault (ACRD500 series only)
 - ao. High suction pressure
4. Logging: The microprocessor controller shall log and display all available events. Each alarm log shall contain time/date stamp as well as operating conditions at the time of occurrence. The controller shall display the run time hours for major components.

E. Network Management Card

The unit shall include a Network Management Card to provide management through a computer network through TCP/IP. Management through the network should include the ability to change set points as well as view and clear alarms.

F. Cooling Coil And Condensate Pan

1. ACRD100 and ACRD200 series:
 - a. The cooling coil shall use corrugated aluminum fin and copper tube coils. The coil header is equipped with a drip plate in the bottom to capture and direct the condensation accumulating on the suction header tube to the drain pan.
2. ACRD500 series:
 - a. The cooling coil shall use raised lance type corrugated aluminum fin and 12.7-mm (1/2-in) OD copper tube coils. Fin shall be a minimum of 0.0055 in thick. Tube wall shall be a minimum of 0.016 in thick. Coil end supports shall be a minimum 18 gauge G90 galvanized steel. The coil shall be rated for a maximum pressure of 3447.3 kPa (500 psig) or higher, and the coils are certified in accordance with UL207. The coil header is equipped with a drip plate in the bottom to capture and direct the condensation accumulating on the suction header tube to the drain pan.

G. Compressor

1. SCROLL COMPRESSOR (ACRD100 series and ACRD200 series only)
 - a. The high EER (up to 20.0) and few moving parts of scroll compressors shall provide efficient and reliable operation. Scroll technology has unparalleled ability to withstand liquid refrigerant ‘slugging’ which is a major cause of compressor failure.
2. VARIABLE SPEED / VFD ASSEMBLY (ACRD500 series only)
 - a. Compressor: The unit shall be configured with a variable speed reciprocating hermetic compressor using a matched VFD. As a result, the compressor speed can be varied through a range between 30 and 85 Hz to accommodate varying load conditions. VFD firmware is written to include oil return protection in cases where pipe velocities may drop to low speeds during low loading periods.
 - b. Compressor is electrically protected through the VFD.
 - c. Compressor utilizes a sound jacket for noise reduction.
 - d. A sight glass is provided for air cooled system oil charging.

H. Condensate Pump

1. ACRD100 series and ACRD200 series: Dual factory installed and wired condensate pumps shall pump at 9.8 l/h (2.6 g/hr) at 4.9 m (16 ft) of head. Each pump shall have dual internal floats.
2. ACRD500 series: A single factory installed and wired condensate pump shall pump at 11.8 l/h (8.45 g/hr) at 3.5 m (11.5 ft) of head. The pump shall have dual internal floats.
3. Each pump shall have a condensate reservoir made of polymeric materials to prevent corrosion.

I. Filters

1. ACRD100 series and ACRD200 series:
 - a. The standard filters shall be 20% efficient per ASHRAE 52.1, MERV 1 per ASHRAE 52.2, 1/2 in washable mesh filter.
 - b. The optional filter shall be high capacity 2 in pleated, UL 900 Class 2, moisture resistant, with average atmospheric dust spot efficiency of 30%, per AHRAE Standard 52.1, MERV 8 per ASHRAE 52.2.
2. ACRD500 series:
 - a. The standard pleated filters shall be 96mm (3.75in) deep, and 30% efficient per ASHRAE Standard 52.1, UL Class 2 (MERV 8 per ASHRAE 52.2). Filters shall be EN779 G4 efficient.
 - b. The optional filter shall be 85% efficient per ASHRAE Standard 52.1 (MERV 13 per ASHRAE 52.2, EN779 F7).

J. Temperature Sensors

1. Internal Temperature Sensors: Thermistor temperature sensors shall be mounted behind the front and rear doors to provide control inputs based on supply and return air temperature. Sensor accuracy shall be within ± 1 degree F accuracy.
2. Remote Temperature Sensors
 - a. ACRD500 series: Three remote rack inlet temperature sensors shall be shipped with the unit to provide control input based on rack inlet temperature.
 - b. ACRD100 and ACRD200 series: One remote rack inlet temperature sensor shall be shipped with the unit to provide control input based on rack inlet temperature.

K. Selectable Top Or Bottom Piping (ACRD500 Series)

1. Pipe connections: The unit is equipped to facilitate field connections from either the top or bottom. Unit connections shall be made internal to the unit.
2. Pipe adapter: The unit shall include two pipe adapters that convert a 31.75-mm (1 1/4-in) NPT to a 31.75-mm (1 1/4-in) BSPT (manufactured in accordance with BS21). Pipe adapters shall ship loose with the unit for field installation where applicable.

L. Cable Water Detector (Optional)

1. The optional leak detection sensing cable shall be shipped loose with the unit. If water or other conductive liquids contact the cable anywhere along its length, the main controller visually and audibly annunciates the leak.
2. The optional detector shall be provided with 6.1 m (20 ft) of cable. Cable may be cascaded up to 24.4 m (80 ft).

M. Bridge Power Cable Trough

1. An overhead power distribution bridge, that sits between adjacent NetShelter racks and allows for removal of the unit without disrupting the overhead power cabling, is available as an accessory.
2. Cable trough shall be constructed of 16 gauge cold rolled steel with a black powder coat finish.

N. Bridge Data Partition

1. An overhead cable distribution, that sits between adjacent NetShelter racks and allows for removal of the unit without disrupting overhead cabling, is available as an accessory.
2. Data partition shall be constructed of 16 gauge cold rolled steel with a black powder coat finish.

O. Cooling Fluids (ACRD200 Series)

Water and solutions of propylene or ethylene glycol up to 50% may be used. Solutions of brine or other aqueous salt are NOT permitted.

P. Freeze Protection (ACRD200 Series)

Per ASHRAE Handbook Fundamentals 2001 21.5, a maximum of 30% ethylene glycol and 35% propylene glycol are needed for freeze protection. See the ASHRAE handbook for more details.

Guidelines for Installation

The InRow RD provides reliable, accurate temperature control of computer rooms, laboratories, and other environments that require close tolerance control. The unit incorporates the latest system design innovations to provide you with optimum efficiency, reliability, and accuracy of control.

The InRow RD unit will provide years of trouble-free service when installed and maintained by technically qualified personnel. For more detailed information, see the appropriate InRow RD Installation manual:

ACRD100 series: 990-3211

ACRD200 series: 990-3213

ACRD500 series: 990-3235

Room preparation

During the design of the room, consideration should be given to the following factors: ease of entry for the system, floor-loading factors, and accessibility of piping and wiring.

The room must be sealed with a vapor barrier to minimize moisture infiltration. Polyethylene film (plastic sheeting) is a good vapor barrier for ceiling and wall applications. Rubber- or plastic-based paints should be applied to concrete floors and walls. The room should be thoroughly insulated to minimize thermal loads and make-up air (if required) should be preconditioned to reduce additional temperature, filtration, and moisture loads.

Service access

For routine service while in the row, at least 914.4 mm (36 in) of clear space must be left in the front and rear of the unit. To move the equipment outside the row for service, an area of 1219 mm (48 in) of clear space is required.

Receiving the unit

Your InRow RD unit has been completely tested and inspected prior to shipment. To ensure that you have received the unit in excellent condition, perform a careful inspection of the crating and the unit immediately upon receipt. Verify that all parts ordered were received as specified and that the unit is the correct size and voltage necessary to fulfill your environmental control needs. Report any damage discovered to the freight carrier. If necessary, contact the APC field service department for help in repairing or replacing damaged parts. While APC is not responsible for damage incurred in transit, we want to make sure that you have no undue delays in your system start-up. See the unpacking sheet and installation manual for more information.

Rigging

The unit is manufactured with a formed steel frame for maximum strength and unit integrity. However, as with all electrical and mechanical equipment, you must take care with proper rigging of your unit.

When using a forklift to move the unit, use the shipping skid to protect the bottom of the unit. When using chains, cables, or rope to lift the unit, use spreader bars to prevent damage to the finished panels. Four threaded M10X16 holes are provided in the top of the frame to accommodate lifting eye bolts that can be utilized to lift the unit.

Condensate drain

Condensation from the evaporator pan is collected and discharged by the condensate pump to a condensate line supplied with the unit. Additional condensate piping is required to route to the building condensate system.

Note: Because of an ongoing program dedicated to product improvement, specifications are subject to revisions without notice. APC assumes no responsibility, and disclaims all liability for damages resulting from use of this information or for any errors or omissions.

APC Worldwide Customer Support

Customer support for this or any other APC product is available at no charge in any of the following ways:

- Visit the APC Web site to access documents in the APC Knowledge Base and to submit customer support requests.
 - **www.apc.com** (Corporate Headquarters)
Connect to localized APC Web sites for specific countries, each of which provides customer support information.
 - **www.apc.com/support/**
Global support searching APC Knowledge Base and using e-support.
- Contact an APC Customer Support center by telephone or e-mail.
 - Regional centers
